Professional Summary

Full-Stack Web Developer and Software Engineering student with practical experience building and shipping complete web applications from database design to user interface. Proficient in **PHP, MySQL, JavaScript, React, and Java**. Delivered three production-ready systems featuring role-based access control, QR-based ordering, real-time dashboards, and secure CRUD operations. Seeking a **Junior Developer or Internship** role to contribute immediately and grow within a collaborative engineering team.

Technical Skills

Languages: PHP, JavaScript, Java, SQL, HTML5, CSS3

Frontend: React.js, Responsive Design, QR Code Integration

Backend: PHP (MVC), REST APIs, Java (Spring Boot basics)

Databases: MySQL, SQLite, Database Design & Normalization

Tools: Git, GitHub, VS Code, Postman

Currently Learning: Node.js, JWT Authentication, Machine Learning

Projects

Hotel Food Ordering System | *PHP, MySQL, JavaScript, HTML, CSS* GitHub ↗

- Architected a full-stack hotel ordering platform with QR code-based table ordering, enabling guests to place orders without staff intervention and reducing order errors.
- Built a live kitchen dashboard with real-time order status updates, improving communication between front-of-house and kitchen staff.
- Developed a billing module with order tracking, discount handling, and itemized receipt generation — delivering a production-grade POS workflow.
- Designed a normalized MySQL schema for menus, tables, orders, and staff roles to handle concurrent orders without data conflicts.

Student Feedback Management System | *PHP, MySQL, JavaScript, HTML, CSS* GitHub ↗

- Built a feedback portal where students submit course evaluations and admins review, filter, and export aggregated reports — replacing a manual paper-based process.
- Implemented server-side CRUD with input validation and XSS mitigation to ensure data integrity and application security.
- Designed a dual-panel interface separating student submission and admin review, reducing navigation steps for both user roles.

Haru Digital Students Record System | *PHP, MySQL, JavaScript, HTML, CSS* GitHub ↗

- Delivered a digital academic records platform for a secondary school covering grade entry, attendance tracking, and academic reporting across three roles: admin, teacher, and student.
- Enforced role-based access control (RBAC) ensuring each user type accesses only the data and actions permitted by their role.
- Built exportable reporting features generating structured data summaries, reducing manual record consolidation time for staff.

Education

Wachemo University Hossana, Ethiopia

Bachelor of Science in Software Engineering – *CGPA: **3.15*** *Expected: 2020 E.C.*

- **Relevant Coursework:** Database Systems, Object-Oriented Programming, Software Engineering, Operating Systems, Computer Networks, Web Development, Distributed Systems

Certifications

Data Fundamentals – Udacity Verify ↗

Fundamental AI – Udacity Verify ↗

What I Bring to a Team

- Ability to take a project from requirements to a working, deployed application
- Experience designing databases and building secure, role-based backend systems
- Clean, readable code with attention to security (XSS prevention, input validation)
- Fast learner — currently expanding into Node.js, JWT, and Machine Learning
- Collaborative mindset and strong communication skills

Soft Skills

- Problem Solving
- Team Collaboration
- Quick Learner
- Attention to Detail
- Time Management
- Communication

Languages

- **English** – Intermediate
- **Amharic** – Native
